Why Eurowood Aluminium Cladding?

EUROWOOD comes in a variety of finishes from a striking simplicity accentuating clean lines to the warm look and feel of timber - all without the associated maintenance issues of timber, and with the added benefits of aluminium.

Finishing Touches

Our range of finishing options can be used to emphasise, blend, highlight and accentuate the design features of any home.

Warranty

With reasonable maintenance, our finishes are guaranteed for a minimum period of 15 years from the date of application. Colour integrity is also guaranteed for 15 years.

Powdercoating

Powdercoating is one of the most durable colour-coatings available. AEONOX is FMI's breakthrough, tough, scratch-resistant powder coat technology that carries added protection for aluminium and cladding surfaces. The super - fine texture finish and advanced formulation technology combine to protect the surface from abrasions and minimise scratches.

Patented Cavity Clip System

Traditionally, timber battens are used to fix cladding to a wall. This results in multiple closed-off cavities, which inhibit airflow, creating uneven equalisation zones around the house. Our patented clip system addresses this allowing for total air movement.

Weather Seals

Eurowood cladding is designed to keep the weather outside and the walls protected with a superior cladding and weather seal system. The patented cavity clip system and the corner system ensure continuous airflow around the inside of the cavity which makes for a dryer home.

Environment

Eurowood sublimation and powdercoat finishes are environmentally friendly. Unlike wet paint applications, our finishes are solvent-free and applied electrostatically. When your home reaches the end of its life, our aluminium products can be completely recycled.

Low Maintenance

Eurowood aluminium cladding does not warp or swell and the amount of time spent on home maintenance can be significantly reduced. We recommend a regular inspection, especially for homes close to the coast. Periodic washing with water and even a small amount of well diluted, mild detergent for dirt, will prolong the life of the product. Washing in cool conditions is advisable to prevent heat streaks. (See full maintenance details on our website).

Weatherboard Design Options

The Eurowood weatherboard design options we offer can enhance the feel you intend for your build. They can vary from a clean modern look to more conventional weatherboard style for a traditional Kiwi bungalow.

The panels are all designed with a superior sealing and airflow system to keep the weather outside and they will never warp or swell.
